

Managed/Verified Video: ProfitWatch®

Protect your employees, your business, and your profits with ProfitWatch Surveillance Systems. Our video systems are comprised of cameras, monitors, recorders and controllers to help:

- Reduce losses and shrinkage
- Provide a safe and secure environment
- Eliminate the need for expensive guard services
- Reduce risk, liability and insurance costs

deter crime... *control* internal shrinkage...
and *protect* lives 24 hours a day.

ProfitWatch includes options that can turn a standalone CCTV system into an interactive, real-time system – where our monitoring center personnel can observe, listen in, and talk to subjects on the customer's premises in addition to making video and audio recordings.

ProfitWatch is designed to deter criminal activity, not just film it. In addition to cameras and a video recorder, in-store equipment includes microphones and

loudspeakers. Security personnel at our monitoring center can observe and record store activity, talk to store personnel or customers, and, if necessary, dispatch police officers or contact store management.

The "presence" of live security personnel on your premises, through interactive video, will stop many crimes before they start and allow recording and immediate reporting of exceptional incidents.

Monitor your operations while off-site, enabling you to visit multiple locations instantaneously to observe customer service, operations, register transactions and other business activities.

Monitor your business from your laptop or through the Internet

Now you can easily and affordably monitor your entire business from any laptop or desktop computer anywhere in the world.

Remote Video Verification

Allows triggering events to transmit video images to our monitoring center—or in the case of a client with a large enterprise system, to your own monitoring center. It also gives you the ability to view the site from your office or home and even perform remote video guard tour services.

PROFITWATCH: VIDEO SURVEILLANCE SYSTEMS

Remote Video Tours

Uses a digital video transmission unit for remote guard tour services, saving you money.

Transaction Verification Interface

Automatically records cash register transactions to prevent internal loss and shrinkage control. We design the system so that video cameras are strategically located to view all cash register activity. Video recording can be initiated by certain types of register transactions—everything from cash refunds to credit card entries into a register keypad. As the transaction occurs, the system combines the data stream and video from the cash register camera. The data and video are logged to hard drive for retrieval, identification, evaluation, and investigation.

Benefits

- Support sales and marketing activities by viewing customers' habits, store displays, stocking, cleanliness, and other issues that affect the customer buying experience.
- Capture live images of unauthorized activity (i.e. intrusion, theft, vandalism, sabotage, etc.) in our UL Listed Secure Operations Center.
- Assist in reducing false alarms.
- Observe multi-sites from your PC or laptop.
- Provide peace of mind for your employees who know that help is available in real time.
- Monitor cash register transactions and review based upon defined events such as voids, no sales, etc
- Identify unauthorized employee activity to help deter internal theft and shrinkage.
- Enhance customer service by observing customer interaction.
